Nashville, Tennessee

Financial Interest Disclosure

CCD Week 2016
Robbert JC Slebos, PhD

I have the following financial relationships to disclose:

Co-Founder and Stockholder:
Protypia, Inc

I will not discuss off label use and/or investigational use in my presentation

CanMEDS Roles Covered

|	
	Medical Expert (as *Medical Experts*, physicians integrate all of the CanMEDS Roles, applying medical knowledge, clinical skills, and professional values in their provision of high-quality and safe patient-centered care. *Medical Expert* is the central physician Role in the CanMEDS Framework and defines the physician's clinical scope of practice.)
	Communicator (as Communicators, physicians form relationships with patients and their families that facilitate the gathering and sharing of essential information for effective health care.)
	Collaborator (as *Collaborators*, physicians work effectively with other health care professionals to provide safe, high-quality, patient-centred care.)
	Leader (as *Leaders*, physicians engage with others to contribute to a vision of a high-quality health care system and take responsibility for the delivery of excellent patient care through their activities as clinicians, administrators, scholars, or teachers.)
	Health Advocate (as *Health Advocates*, physicians contribute their expertise and influence as they work with communities or patient populations to improve health. They work with those they serve to determine and understand needs, speak on behalf of others when required, and support the mobilization of resources to effect change.)
X	**Scholar** (as *Scholars*, physicians demonstrate a lifelong commitment to excellence in practice through continuous learning and by teaching others, evaluating evidence, and contributing to scholarship.)
	Professional (as *Professionals,* physicians are committed to the health and well-being of individual patients and society through ethical practice, high personal standards of behaviour, accountability to the profession and society, physician-led regulation, and maintenance of personal health.)

Outline

- **Proteomic techniques:**
  - Global 'shotgun' and Targeted Proteomics

- **Colon carcinoma cell line models:**
  - Proteomic analysis of a panel of 10 colorectal cell lines by MMR status
    Cancer Res (2014) 74:387-97

- **Proteogenomic analysis of TCGA colorectal carcinomas:**
  - Integrative analysis of 90 TCGA samples
   Nature (2014) 513:382-287

Outline

- Proteomic techniques:
  - Global 'shotgun' and Targeted Proteomics

- Colon carcinoma cell line models:
  - Proteomic analysis of a panel of 10 colorectal cell lines by MMR status
    Cancer Res (2014) 74:387-97

- Proteogenomic analysis of TCGA colorectal carcinomas:
  - Integrative analysis of 90 TCGA samples
    Nature (2014) 513:382-287

Analysis of 10 colorectal cell lines
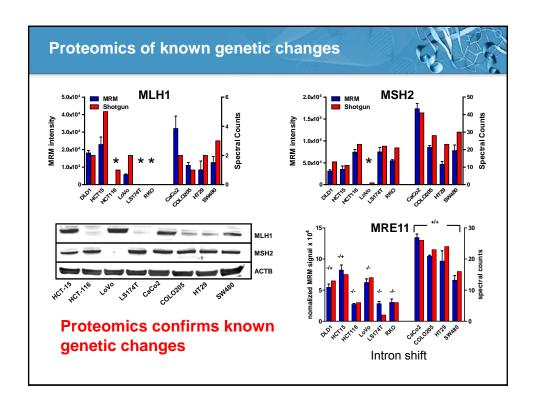

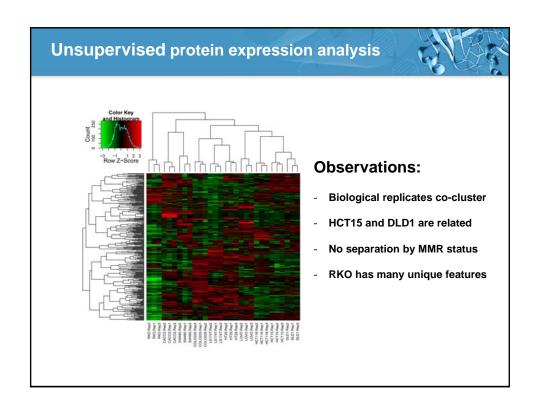

- Are known DNA alterations detectable as proteomic changes?
- How do the proteomes compare based on MMR status?

- 10 colorectal cancer cell lines: RKO, HCT116, HCT15, DLD1, LOVO, LS174T, CACO2, COLO205, HT29, SW480
- Selected based on DNA mismatch repair capacity
- Analyzed by shotgun proteomics

Proteomics:
1) Shotgun proteomics by IEF peptide separation, LC-MS/MS on Thermo-LTQ
2) Targeted proteomics for selected proteins using MRM on LTQ-vantage

Shotgun protein inventory of 5,284 protein groups at a protein FDR of 4.6%

Proteomics of known genetic changes

Proteomics confirms known genetic changes

Unsupervised protein expression analysis

Observations:

- **Biological replicates co-cluster**

- **HCT15 and DLD1 are related**

- **No separation by MMR status**

- **RKO has many unique features**

Enrichment analysis of RKO proteins

Enrichment ratio: 2.30
p-value < 0.01

128 26 488

Observed

143 11 503

Expected

154 proteins down-regulated in RKO

2571 genes in the human genome having **conserved** TCF3 promoter of which 514 are detectable as proteins by LC-MS/MS

Conclusion:
Absence of tight-junction and cellular adhesion molecules due to reduced **TCF3 activity** is evidence for **Epithelial-to-Mesenchymal Transition (EMT)**

6

EMT phenotype of RKO cell line

SW480

RKO

Wound-healing assay

0 Hours   24 Hours   48 Hours

Invasion Assay

RKO prior results on EMT phenotype

- EMT phenotype not discovered by gene expression studies

  Cancer Res (2014) 74:3438

- Observed in study on sensitivity to EGFR-inhibition
  - RKO is resistant to EGFR-inhibition
  - Loss of epithelial markers E-cadherin and β-catenin
  - High ZEB1 expression by RT-PCR
  - No gain of mesenchymal markers vimentin or fibronectin
  - No biological tests for EMT

  Mol Cancer Ther (2007) 6:532

  Novel proteomic evidence for EMT in RKO by global protein analysis
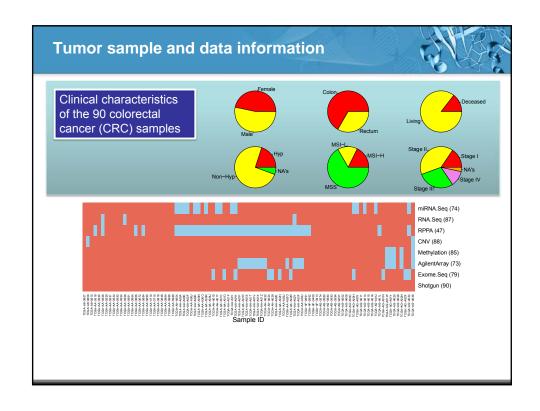

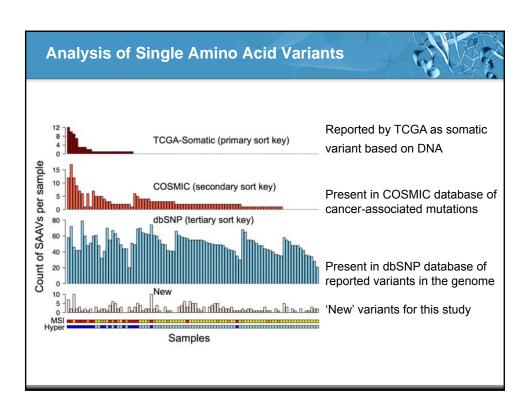

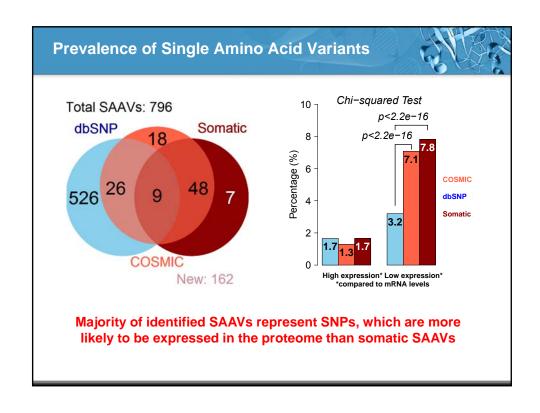

Tumor sample and data information

Analysis of Single Amino Acid Variants

Reported by TCGA as somatic variant based on DNA

Present in COSMIC database of cancer-associated mutations

Present in dbSNP database of reported variants in the genome

'New' variants for this study

Prevalence of Single Amino Acid Variants

Total SAAVs: 796

dbSNP — Somatic
18

COSMIC
dbSNP
Somatic

High expression* Low expression*
*compared to mRNA levels

Majority of identified SAAVs represent SNPs, which are more likely to be expressed in the proteome than somatic SAAVs

Proteomic subtypes of colorectal carcinoma

Co-expression analysis of Subtype C
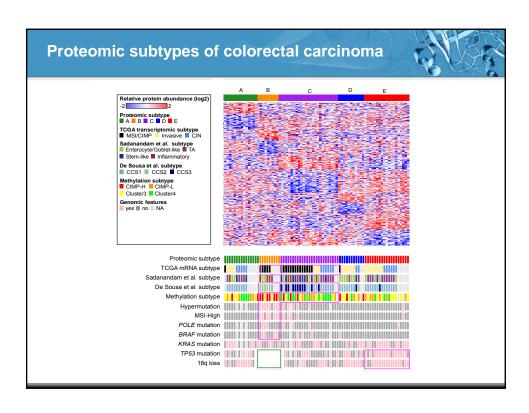

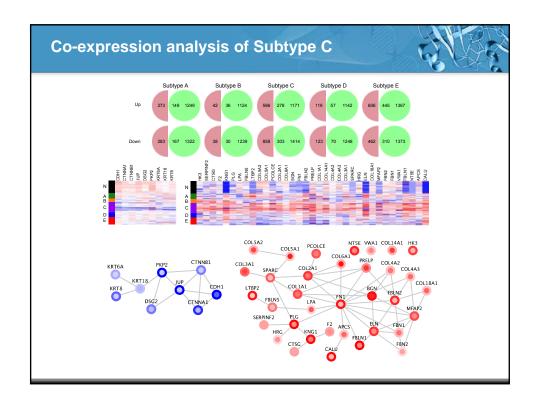

What does proteomics teach us about colon cancer that genetics does not?

- Proteomic profiling identifies a functionally relevant phenotype (EMT) that cannot be inferred from genetic features of RKO cells

- Proteomics identifies DNA variants that are translated to proteins and shows that many have reduced expression

- Proteomics identifies distinct colorectal cancer subtypes that are not detected by transcriptome profiles

Proteomics bridges the inference gap between genetic features and phenotypic characteristics in colon cancer
